

WHAT IS CLAIMED IS:

1. An image processing apparatus comprising:
 - a communication unit for communicating with an information processing apparatus having a function of operating image information;
 - a storage for storing first image information which represents at least one element in a compressed format therein; and
 - a controller for sending second image information which represents the at least one element to the information processing apparatus, the amount of the second image information being smaller than that of the first image information, acquiring result information representing an operation which is executed for the sent second image information on the information processing apparatus, editing the first image information according to the acquired result information in an intermediate process where the first image information stored in the storage is expanded, and sending the edited first image information in the compressed format to the information processing apparatus.
2. The image processing apparatus according to claim 1, wherein the controller executes at least one of a moving process, an enlargement process, a reduction process and a deletion process on the at least one elements to edit the first image information in the intermediate process.
3. The image processing apparatus according to claim 1, wherein the controller edits the first image information in the intermediate process according to the acquired result information such that one of the at least one element is superimposed on

another of that when the first image information represents a plurality of elements.

4. The image processing apparatus according to claim 1, wherein a network is provided to connect among the image
5 processing apparatus, the information processing apparatus and other information processing apparatuses, and

the controller broadcasts the first image information which is edited and composed to a plurality of desired information processing apparatuses of the information processing apparatus and the other
10 information processing apparatuses.

5. The image processing apparatus according to claim 4, wherein the network comprises a satellite communication network.

6. An image processing apparatus comprising:
a communication unit for communicating with an
15 information processing apparatus which processes first image information and second image information in association with each other, both of the first image information and the second image information representing at least one element and the amount of the second image information being smaller than that of the first image
20 information;

an image processor for receiving the second image information from the information processing apparatus via the communication unit, displaying the received second image information on a given display device, receiving an operation
25 instruction for the displayed second image information, processing the displayed second image information according to the operation instruction and sending result information representing the

processed and displayed second image information to the information processing apparatus; and

an output controller for receiving the first image information via the communication unit, which is edited according to the result information on the information processing apparatus, and causing a given printing device to print the received first image information.

7. The image processing apparatus according to claim 6, wherein when the operation instruction includes adding process for adding additional information to the displayed second image information, the image processor saves the additional information, and

the output controller executes a superimpose process for the received first image information and the saved additional information and causes the given printing device to print a result of the superimpose process.

8. An image processing method applied to an image processing apparatus having a communication unit for communicating with an information processing apparatus and a storage for storing first image information which represents at least one element in a compressed format therein, the information processing apparatus having a function of operating image information, the method comprising the steps of:

sending second image information which represents the at least one element to the information processing apparatus, the amount of the second image information being smaller than that of the first image information;

acquiring result information representing an operation which

is executed for the sent second image information on the information processing apparatus;

editing the first image information according to the acquired result information in an intermediate process where the first image information stored in the storage is expanded; and

sending the edited first image information in the compressed format to the information processing apparatus.

9. The image processing method according to claim 8, wherein the editing step includes a substep of executing at least one of a moving process, an enlargement process, a reduction process and a deletion process on the at least one elements to edit the first image information in the intermediate process.

10. The image processing method according to claim 8, wherein the editing step includes a substep of editing the first image information in the intermediate process according to the acquired result information such that one of the at least one element is superimposed on another of that when the first image information represents a plurality of elements.

11. An image processing method applied to an image processing apparatus having a communication unit for communicating with an information processing apparatus having a function of processing first image information and second image information in association with each other, both of the first image information and the second image information representing at least one element and the amount of the second image information being smaller than that of the first image information; the method comprising the steps of:

receiving the second image information from the information processing apparatus via the communication unit;

displaying the received second image information on a given display device;

5 receiving an operation instruction for the displayed second image information;

processing the displayed second image information according to the operation instruction;

10 sending result information representing the processed and displayed second image information to the information processing apparatus;

receiving the first image information via the communication unit, which is edited according to the result information on the information processing apparatus; and

15 causing a given printing device to print the received first image information.

12. The image processing method according to claim 11, further comprising the steps of:

20 when the operation instruction includes adding process for adding additional information to the displayed second image information, saving the additional information; and

executing a superimpose process for the received first image information and the saved additional information, and

25 wherein the causing step includes a substep of causing the given printing device to print a result of the superimpose process.

13. An image information distributing method applied to a network system including a first image processing apparatus and a

second image processing apparatus, the first image processing apparatus and the second image processing apparatus being interconnected each other, the first image processing apparatus storing first image information in a compressed format and second
5 image information, both of the first image information and the second image information representing at least one element, the amount of the second image information being smaller than that of the first image information, the method comprising the steps of:

- 10 sending the second image information to the second image processing apparatus from the first image processing apparatus;
- displaying the second image information on a given display device of the second image processing apparatus;
- receiving an operation instruction for the displayed second image information in the second image processing apparatus;
- 15 processing the displayed second image information according to the operation instruction in the second image processing apparatus;
- sending result information representing the processed and displayed second image information to the first image processing apparatus from the second image processing apparatus;
- 20 editing the first image information, in the first image processing apparatus, according to the result information in an intermediate process where the first image information stored in the storage is expanded;
- 25 sending the edited first image information in the compressed format to the second image processing apparatus from the first image processing apparatus; and

causing a given printing device of the second image processing apparatus to print the first image information sent from the first image processing apparatus.

5 14. The image information distributing method according to claim 13, wherein the network system includes other image processing apparatuses, and the edited first image information sending step includes a substep of broadcasting the first image information which is edited and composed to a plurality of desired information processing apparatuses of the second image processing apparatus and the other image processing apparatuses.

15 15. A storage medium having computer readable program code means embodied in the medium, the storage medium being applicable to a computer having a communication unit for communicating with an apparatus and a storage for storing first image information which represents at least one element in a compressed format therein, the apparatus having a function of operating image information, the computer readable program code means comprising:

20 computer readable program code means for sending second image information which represents the at least one element to the apparatus, the amount of the second image information being smaller than that of the first image information;

25 computer readable program code means for acquiring result information representing an operation which is executed for the sent second image information on the apparatus;

computer readable program code means for editing the first image information according to the acquired result information in

an intermediate process where the first image information stored in the storage is expanded; and

5 computer readable program code means for sending the edited first image information in the compressed format to the apparatus.

16. A storage medium having computer readable program code means embodied in the medium, the storage medium being applicable to a computer having a communication unit for communicating with an apparatus having a function of processing first image information and second image information in association with each other, both of the first image information and the second image information representing at least one element, the amount of the second image information being smaller than that of the first image information, the computer readable program code means comprising:

10

15

computer readable program code means for receiving the second image information from the apparatus via the communication unit;

20 computer readable program code means for displaying the received second image information on a given display device;

computer readable program code means for receiving an operation instruction for the displayed second image information;

25 computer readable program code means for processing the displayed second image information according to the operation instruction;

computer readable program code means for sending result information representing the processed and displayed second image

information to the apparatus;

computer readable program code means for receiving the first image information via the communication unit, which is edited according to the result information on the apparatus; and

5 computer readable program code means for causing a given printing device to print the received first image information.

17. A computer program operational on a computer having a communication unit for communicating with an apparatus and a storage for storing first image information which represents at least one element in a compressed format therein, the apparatus having a function of operating image information, the computer program comprising the steps of:

15 sending second image information which represents the at least one element to the apparatus, the amount of the second image information being smaller than that of the first image information;

acquiring result information representing an operation which is executed for the sent second image information on the apparatus;

20 editing the first image information according to the acquired result information in an intermediate process where the first image information stored in the storage is expanded; and

sending the edited first image information in the compressed format to the apparatus.

18. The computer program according to claim 17, wherein the computer program is stored in a computer readable storage medium.

19. A computer program operational on a computer having a communication unit for communicating with an apparatus having a

function of processing first image information and second image information in association with each other, both of the first image information and the second image information representing at least one element, the amount of the second image information being
 5 smaller than that of the first image information, the computer program comprising the steps of:

receiving the second image information from the apparatus via the communication unit;

10 displaying the received second image information on a given display device;

receiving an operation instruction for the displayed second image information;

processing the displayed second image information according to the operation instruction;

15 sending result information representing the processed and displayed second image information to the apparatus;

receiving the first image information via the communication unit, which is edited according to the result information on the apparatus; and

20 causing a given printing device to print the received first image information.

20. The computer program according to claim 19, wherein the computer program is stored in a computer readable storage medium.

25 21. An image processing apparatus comprising:

a communication unit for communicating with an information processing apparatus having a function of operating

image information;

a storage for storing first image information which represents at least one element; and

a controller for sending second image information which
 5 represents the at least one element to the information processing apparatus, the amount of the second image information being smaller than that of the first image information, acquiring result information representing an operation which is executed for the sent second image information on the information processing
 10 apparatus, editing the first image information according to the acquired result information, and sending the edited first image information to the information processing apparatus.

22. The image processing apparatus according to claim 21,
 15 wherein the result information represents identification of the at least one elements and each location thereof.

23. An image processing method applied to an image processing apparatus having a communication unit for communicating with an information processing apparatus and a storage for storing first image information which represents at least
 20 one element, the information processing apparatus having a function of operating image information, the method comprising the steps of:

sending second image information which represents the at least one element to the information processing apparatus, the
 25 amount of the second image information being smaller than that of the first image information;

acquiring result information representing an operation which

is executed for the sent second image information on the information processing apparatus;

editing the first image information according to the acquired result information; and

5 sending the edited first image information to the information processing apparatus.

24. The image processing method according to claim 23, wherein the result information represents identification of the at least one elements and each location thereof.

10 25. An image information distributing method applied to a network system including a first image processing apparatus and a second image processing apparatus, the first image processing apparatus and the second image processing apparatus being interconnected each other, the first image processing apparatus
15 storing first image information and second image information, both of the first image information and the second image information representing at least one element, the amount of the second image information being smaller than that of the first image information, the method comprising the steps of:

20 sending the second image information to the second image processing apparatus from the first image processing apparatus;

displaying the second image information on a given display device of the second image processing apparatus;

25 receiving an operation instruction for the displayed second image information in the second image processing apparatus;

processing the displayed second image information according to the operation instruction in the second image processing

apparatus;

sending result information representing the processed and displayed second image information to the first image processing apparatus from the second image processing apparatus;

5 editing the first image information, in the first image processing apparatus, according to the result information;

sending the edited first image information to the second image processing apparatus from the first image processing apparatus; and

10 causing a given printing device of the second image processing apparatus to print the first image information sent from the first image processing apparatus.
